

AI Engineer

Profile

AI Engineer with 5+ years of experience building production backend systems, LLM applications, RAG and conversational AI systems, OCR/document-processing tools, data pipelines, and cloud APIs. Strong in Python, FastAPI, Flask, PostgreSQL, LangChain, OpenAI, Docker, AWS, CI/CD, and production system design. Experienced across fintech, edtech, and telecommunications, with ownership from architecture and database design to cloud deployment. Focused on building reliable, maintainable systems for real production use.

Professional Experience

ONOW Ascent, Remote

Jun 2024 to Apr 2026

AI System Engineer

- Owned **the backend architecture** for Daytwo and the Loan Management system end-to-end, supporting **200+ active users** with improved reliability and performance.
- Built **LLM-powered RAG and conversational AI features** for income/expense recording, financial queries, business summaries, and **behavior-based daily action cards**, helping users record faster, understand performance, and take the next best business action.
- Designed and evaluated **the agentic workflows** for item matching, auto fill, and double-entry classification, reducing manual entry and improving financial data accuracy.
- Built and **maintained the pipelines**, keeping production and analytics databases in sync, directly unblocking business reporting.
- Designed and optimized **PostgreSQL schemas, indexes, and queries** for faster response times and scalable data storage.
- Established **CI/CD pipelines** with GitHub Actions, reducing release time from days to hours across development and production environments.
- Developed **React Native mobile features** to support end-to-end product delivery and ensure smooth integration with backend APIs and AI-powered services.

ONOW, On-site | Myanmar

Nov 2023 to Jun 2024

AI Engineer

- Owned **the FastAPI backend and database design** for the Learning Assistance Web Platform, including API architecture, schema design, data models, and core workflows for lessons, users, quiz questions, and learning progress tracking.
- Contributed to the development of a **RAG-based lesson PDF pipeline** that processed lesson materials and supported quiz generation, including multiple-choice questions, helping convert static PDFs into interactive learning content.
- Built an **AI-assisted coaching CRM** for MSME mentors, supporting call-note recording, follow-up scheduling, and AI-generated guidance based on client data and organizational coaching rules.

XENoptics, On-site | Myanmar

Mar 2023 to Nov 2023

Python Developer

- Developed and optimized **graph-based route calculation algorithms** for fiber management systems using **BFS, NumPy, and efficient data structures**, improving route calculation speed by **5x**.
- Built **backend services and APIs** for route calculation and system integration, enabling reliable data flow between network devices and internal systems.
- Developed the **frontend layer and command-line tools** for camera tuning workflows, helping technicians adjust focus and color before station device installation and automatically generate sensor data reports after tuning.
- Collaborated with cross-functional teams to deliver scalable software solutions for telecom network planning and reliable system performance.

Partner Associates Int'l Co.,Ltd, On-site | Myanmar

Feb 2021 to Feb 2023

Junior Developer

- Developed an OCR system for Myanmar NRC documents, including data collection, preprocessing, model training, fine-tuning, image enhancement, segmentation, binarization, noise reduction, and post-processing.

- Improved OCR accuracy using spell checking and image preprocessing techniques.
- Built a face detection system for document verification using OpenCV.
- Developed Flask-based APIs for ML model deployment.

Education

B.Sc. (Hons) Computing, University of Greenwich

Dec 2025

Graduated with First Class Honours.

Studied part-time/weekends while working full-time.

Skills

AI / LLM Engineering

LLMs, RAG, Conversational AI, Agentic AI, LangChain, LangGraph, LangSmith, OpenAI API, Embeddings, Vector Search, Structured Outputs, Prompt Engineering

Backend Development

Python, FastAPI, Flask, REST APIs, API Design, Async Processing, Background Jobs, Backend Architecture

Data

PostgreSQL, MySQL, MongoDB, Neo4j, Database Schema Design, Data Modeling, Query Optimization, Indexing, Data Pipelines, ETL

DevOps & Cloud

AWS ECS, AWS RDS, AWS S3, Docker, GitHub Actions, CI/CD, DigitalOcean, Cloud Deployment

Machine Learning & Document AI

OCR, Document Processing, Computer Vision, OpenCV, TensorFlow, Keras, Scikit-learn, Model Deployment

Programming & Tools

Python, JavaScript, React Native, NumPy, Data Structures, Graph Algorithms, BFS, Git, Linux, Codex, Claude Code

Languages

English, Myanmar

Licenses & Certifications

Google Data Analytics Certificate, Google | Coursera

Machine Learning, Stanford online | Coursera
